Falls der Proxy nicht funktioniert

Ich hatte das Problem, das der Update prozesse nicht funktionierte Schuld war ein per default eingetragener mirror von ARCH linux.

```
Welcome to Pi-KVM - Open Source IP-KVM based on Raspberry Pi

The root filesystem of Pi-KVM is mounted in read-only mode by default.
Use command "rw" to remount it in the RW-mode and "ro" to switch it back.

To prevent kernel messages from printing to the terminal use "dmesg -n 1".

To change KVM password use command "kvmd-htpasswd set admin".
