

# Falls der Proxy nicht funktioniert

Ich hatte das Problem, das der Update Prozesse nicht funktionierte.

```
# pacman -Syu
```

The screenshot shows a terminal window with the following content:

Welcome to Pi-KVM - Open Source IP-KVM based on Raspberry Pi

The root filesystem of Pi-KVM is mounted in read-only mode by default.  
Use command "rw" to remount it in the RW-mode and "ro" to switch it back.

To prevent kernel messages from printing to the terminal use "dmesg -n 1".

To change KVM password use command "kvmd-htpasswd set admin".

error: failed to update aur (failed to retrieve some files)  
pikvm 18.9 KiB 0.00 B/s 00:00 [=====] 100%  
error: failed to synchronize all databases  
root@pikvm ~]#

Schuld war ein per default eingetragener Mirror von ARCH linux.

Original in der /etc/pacman.d/mirrorlist ⇒ Server = <http://de3.mirror.archlinuxarm.org/>\$arch/\$repo

die Ziffer 3 durch z.B. 5 austauschen.

Server = <http://de5.mirror.archlinuxarm.org/>\$arch/\$repo

danach noch einmal das Update auslösen

rw  
pacman -Syu  
reboot
